

Bristol ChemLabS Primary School Visits

We regularly visit schools to deliver exciting demo assemblies and hands-on science workshops

Science Assemblies

Exciting & interactive science assemblies for the whole school, delivered by a real scientist. These engaging presentations are especially designed to enthuse primary pupils, with lots of visual demonstrations, colourful experiments and even a few explosions!

“Thank you for a brilliant assembly! The whole school were completely enthralled, we had so many positive comments. It is great that these shows are able to visit school, and provide an opportunity for the children to witness science that they would otherwise be unable to see”

A Primary School Science Coordinator

Practical Workshops

Hands-on science practicals to engage and enthuse students. Turn a classroom into a laboratory with activities led by young research scientists. Suitable for a whole class at a time. The investigations help develop pupils' measuring, observation, co-operation and experimental skills.

“The workshops were brilliant, pitched at just the right level and the children loved using equipment that they would otherwise be unable to use in a primary school environment.”

A Primary Science Coordinator

For a full Science Day, workshops can be combined with a whole school Demonstration Assembly
